Report Date: October 2021

EXECUTIVE SUMMARY

The project is located on approximately 150 acres between Burrow Trail Road (County Access Road) and Oglesby Road east of Lewis Road. The proposed development includes two primary parcels. A 346,175 square foot warehouse facility between Oglesby Road and Borrow Trail Road approximately 1000 feet east of Lewis Road. The second parcel will include a 55,500 square foot warehouse/business service building between the previous mentioned building and Lewis Road.

The proposed development will generate 1080 trips per day with 128 trips during the AM peak and 143 trips during the PM peak.

Lewis Road is not heavily traveled (2870 vehicles per day). As a result, the Oglesby at Lewis and Burrow Trail at Lewis intersections operate at Levels of Service A and B (free flowing and reasonably free flowing). These levels of service will not change when the proposed development is completed.

During peak hours, the Lewis/CH James intersection is currently experiencing heavy traffic. The proposed development will not appreciably change the conditions at Lewis/CH James intersection. Overall, peak hour delay will increase by 2–4 seconds.

Overall, distribution and warehousing land uses generate less traffic than many other development types. For example, a shopping center development could generate 5 to 10 times the trips, compared to the proposed Logistics Center.

"No right turn for trucks" signage and "No trucks" pavement markings are recommended at the Oglesby driveways and at Oglesby/Lewis to deter trucks from turning east on Oglesby and North on Lewis.

Introduction:

The following report was prepared by Atlas Technical Consultants to summarize the findings of a traffic impact study for a proposed development in Powder Springs, Georgia.

Study Location:

The project is located on approximately 150 acres between Burrow Trail Road (County Access Road) and Oglesby Road east of Lewis Road. Intersections included in the study include Oglesby Road at Lewis Road, Lewis Road at Burrow Trail Road, and Lewis Road at C.H. James Parkway.

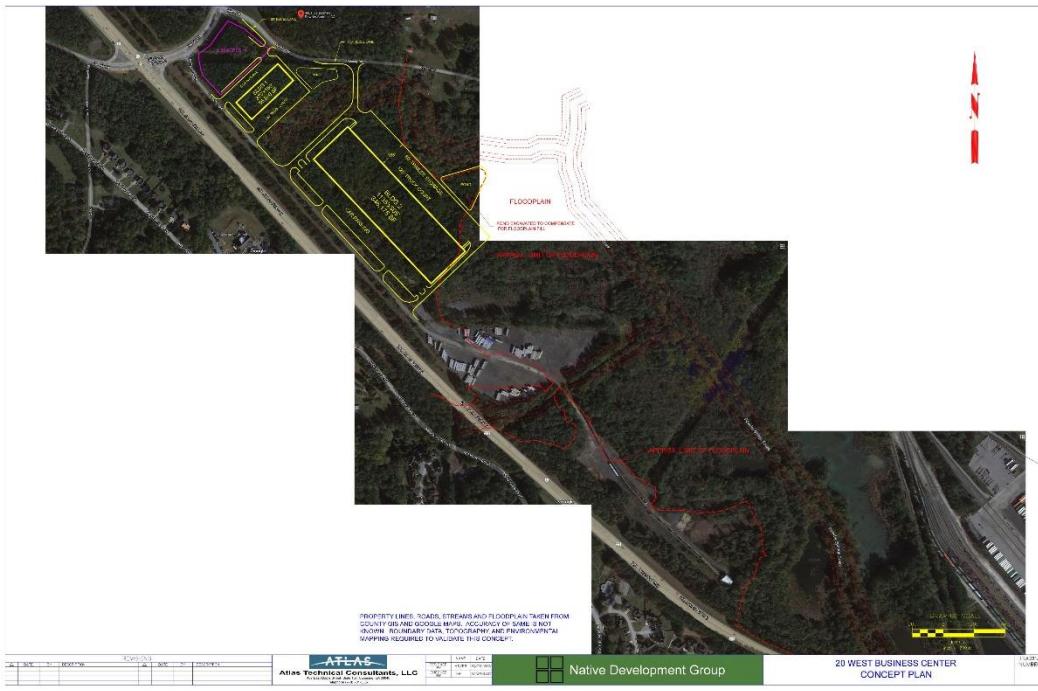

Figure 2: Study Location Map

Overview:

Of the 150 acres approximately 35 will be developed. The proposed development includes two primary parcels. A 346,175 square foot warehouse facility between Oglesby Road and Borrow Trail Road approximately 1000 feet east of Lewis Road. The second parcel will include a 55,500 square foot warehouse/business service building between the previous mentioned building and Lewis Road. Each building will have driveways on both Oglesby Road and on Burrow Trail Road. Each driveway on Oglesby Road will have a deceleration lane for vehicles turning right into the property. There is also an existing trailer repair facility on Burrow Trail Road which will expand from 8 acres to 14 acres. This facility has very low volumes and is not expected to impact traffic. Oglesby Road is a two lane local road with a Speed Limit of 35 MPH. Lewis Road is a two lane minor arterial also with a Speed Limit of 35 MPH. Burrow Trail Road is a local road which only provides access to the trailer facility. It has an assumed Speed limit of 25 MPH. Figure 3 below shows the layout of the proposed project.

Figure 3 - Site Plan

Existing Traffic Data:

GDOT has several count stations in the vicinity of the proposed development. Station 067-8819 is east of the project on Oglesby Road. Station 067-2328 is on C.H. James Parkway just west of Lewis Road. Recent volumes from these stations are listed below.

Table 1: Existing Traffic Data

Year	GDOT Station 067-2328 (AADT)	GDOT Station 067-8819 (AADT)
2020	30,000	870
2019	32,500	900
2018	33,000	900

Traffic counts were conducted on September 23, 2021 on Lewis Road north/east of Oglesby Road and on Burrow Trail Road east/south of Lewis Road. Daily volume on Lewis Road is approximately 2870 vehicles. Volume on Burrow Trail Road is approximately 40 vehicles. Copies of the counts are included in the Appendix.

Turning movement counts were conducted at the 3 intersections to be studied as a part of this project. Copies of the counts are included in the Appendix.

Proposed Development Traffic:

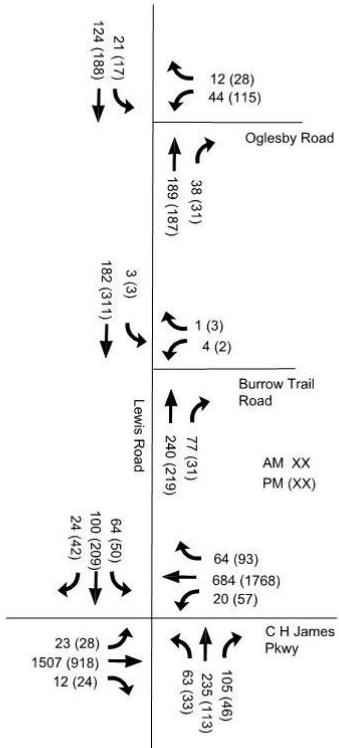

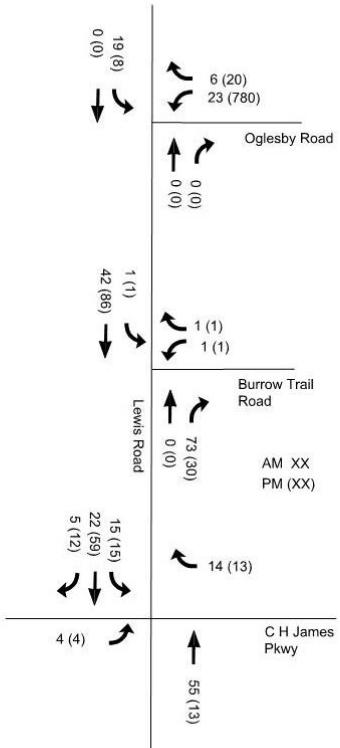

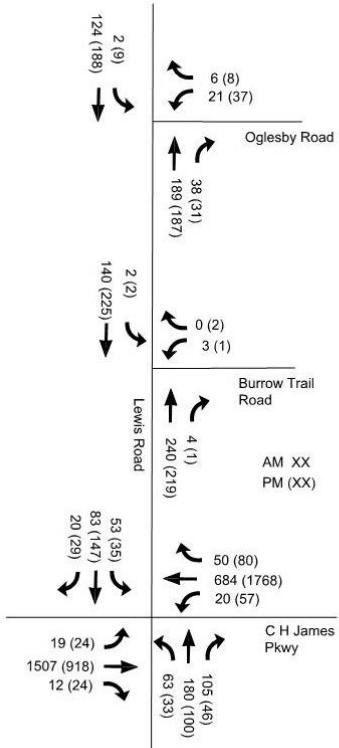

Vehicle trip generation was estimated for the proposed development. The trip generation rates published in the *Institute of Transportation Engineers (ITE) Trip Generation Manual, Tenth Edition* were used to determine the projected traffic. A summary of the trips generated by the proposed development is shown in Table 2. ITE Land Use Type 150 – Warehousing was used for the 346,175 square foot facility. Since the exact nature of the 55,500 Square foot facility is not known at this time a number of alternative land use types were considered. It was concluded to split the building into two land use types. Land use type 110 – General Light Industrial and Type 180- Specialty Trade Center were chosen as a representative sample of the many different type that could end up occupying the facility. A small number of trips were also added for the expansion of the trailer repair facility. The resulting trips forecast to be generated are indicated in the Table 2 below.

Table 2: Generated Traffic

LAND USE	ITE		WEEKDAY	DAILY TOTAL		AM PEAK		PM PEAK	
				ENTER	EXIT	ENTER	EXIT	ENTER	EXIT
		SF (1000s)							
Warehouse	160	346.175	602	301	301	45	14	18	48
General Light Industrial	110	27.75	138	69	69	16	3	2	16
Specialty Trade Contractor	180	27.75	284	142	142	34	12	18	37
Trailer Repair Expansion			56	28	28	2	2	2	2
Total			1,080	540	540	97	31	40	103

Traffic Distribution and Assignment:

The trips indicated above must be distributed to the roadway network. It was assumed that 5% would travel to and come from the east on Oglesby Road. 20% would come from and go to Powder Springs on Lewis Road. The remaining would use C H James Parkway via Lewis Road. The existing volumes, trip distribution and future traffic volumes are indicated in Tables 4, 5, and 6 below.

Capacity Analysis:

Capacity Analysis was performed for the projected AM and PM peak traffic conditions for three intersections in the vicinity of the development. Both existing conditions and future conditions with the proposed development traffic were analyzed. These analyses were performed using the procedures of the Highway Capacity Manual Unsignalized Intersection Analysis and for the C H James intersection the HCM Signalized Intersection Analysis. Capacity is defined as the maximum number of vehicles that can pass over a particular road segment or through a particular intersection within a set time duration. Level-of-service (LOS) is used to describe the operating characteristics of a road segment or intersection in relation to its capacity. LOS is defined as a qualitative measure that describes operational conditions and motorists' perceptions within a traffic stream. The *Highway Capacity Manual* defines six levels of service, LOS A through LOS F, with A (free flowing conditions) being the best and F (extreme delays) the worst. Generally any Level of Service D or better is considered acceptable with Level of Service C or better desirable. The un-signalized intersection capacity analysis only provides a level of service for movements which experience delay which are main street left turns and the side street traffic.

A summary of levels of service and delay for each condition is provided below. The detailed Capacity Analysis printouts are provided in the Appendix.

Table 5: Existing and Future Level of Service and (Delay)

Oglesby Road at Lewis Road				
Movement	Existing Conditions		Future Conditions	
	AM Peak	PM Peak	AM Peak	PM Peak
South Bound L	A (7.7)	A (7.7)	A (7.8)	A (7.7)
West Bound L	B (10.7)	B (11.7)	B (11.4)	B (13.2)
West Bound R	A (9.3)	A (9.3)	A (9.4)	A (9.5)
Overall Intersection	B (10.4)	B (11.3)	B (11.0)	B (12.5)

Table 6: Existing and Future Level of Service and (Delay)

Lewis Road at Burrow Trail Road				
Movement	Existing Conditions		Future Conditions	
	AM Peak	PM Peak	AM Peak	PM Peak
South Bound L	A (7.8)	A (7.7)	A (8.0)	A (7.8)
West Bound L	B (11.1)	B (11.6)	B (11.5)	B (12.6)
West Bound R	A (0.0)	A (9.5)	A (9.6)	B (9.5)
Overall Intersection	B (11.1)	B (10.2)	B (11.1)	B (10.7)

Table 7: Existing and Future Level of Service and (Delay)

Lewis Road at C H James Pkwy				
Movement	Existing Conditions		Future Conditions	
	AM Peak	PM Peak	AM Peak	PM Peak
South Bound	C (30.3)	D (41.0)	C (29.6)	D (46.0)
North Bound	C (34.3)	D (37.6)	D (37.3)	D (36.4)
East Bound	B (17.9)	B (10.4)	C (21.1)	B (12.5)
West Bound	B (10.1)	B (18.3)	B (11.7)	C (24.0)
Overall Intersection	B (18.7)	B (18.6)	C (21.6)	C (23.4)

Conclusion:

The proposed development will have minor impact on the existing traffic.

Recommendations:

"No right turn for trucks" signage and "No trucks" pavement markings are recommended at the Oglesby driveways and at Oglesby/Lewis to deter trucks from turning east on Oglesby and North on Lewis. See Figures 7 and 8 below.
